Assistant Professor, Graduate School of
Biomedical Science (GSBS), The University
of Texas Health Science Center
Houston, Texas

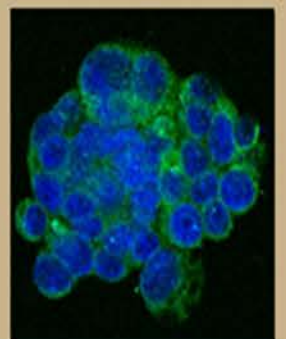

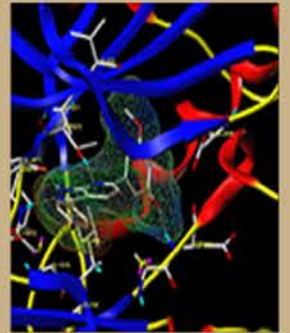

“Long Noncoding RNAs: From Disease to Targeted Therapeutics”

Wednesday, October 2, 2019
9:00 a.m. – 10:30 a.m.
South Campus Research Building 4
(4SCR1.1110)

Synopsis:

While much emphasis has been centered on the role of long noncoding RNAs in cancer and human genetic disease, a gap remains in utilizing this knowledge to develop target specific approaches to modulating long noncoding RNA pathways for therapeutic gain. This seminar is in an effort to translate our current understanding of long noncoding RNA biology into meaningful targeted therapeutics, an eventuality that heralds a new frontier in drug development and therapeutics.
