“Resistance to Targeted Therapies in Chronic Lymphocytic Leukemia”

Wednesday, November 14, 2018
9:00 a.m. – 10:30 a.m.
South Campus Research Building 4 (4SCR1.1110)

Synopsis:
Targeted therapies have introduced a paradigm shift in CLL, however, most patients will eventually relapse. Understanding the mechanisms of relapse will help us develop rational strategies to treat or prevent resistance. In this talk, we will discuss known and potential mechanisms of resistance to targeted therapies in CLL and discuss some novel therapies with the potential to overcome resistance.

Co-sponsored by Developmental Therapeutics Program
