The goals of this educational workshop in LDR and HDR brachytherapy are to improve education and training of LDR and HDR brachytherapy, to facilitate a more rapid transition from education to practice implementation, to ensure high quality brachytherapy delivery and to communicate the value of brachytherapy. The vision of this workshop, jointly provided by MD Anderson and American Brachytherapy Society (ABS), is to increase patient access to high quality brachytherapy for cancer treatment by providing training to the physicians and physicists who perform the procedures.

At the end of this workshop, participants will be familiar with the following as they pertain to the current status of permanent prostate brachytherapy: clinical management for favorable and unfavorable disease, MRI-assisted radiosurgery for HDR and LDR brachytherapy, patient access to treatment, managing side effects of prostate brachytherapy and building a quality brachytherapy program.
